FINANCIAL MANAGEMENT

TUITION NOTES

PATRICK PHIRI

Email: patbuni@gmail.com

SYLLABUS AREAS

1. INRODUCTION TO FINANCIAL MANAGEMENT
2. THE ECONOMIC ENVIRONMENT
3. SOURCES OF FINANCE
4. COST OF CAPITAL
5. CAPITAL STRUCTURE THEORIES
6. DIVIDEND POLICY
7. INVESTMENT APPRAISAL
8. BUSINESS VALUATIONS
9. CURRENCY RISK MANAGEMENT
10. INTEREST RATE RISK MANAGEMENT
11. RATIOS
12. WORKING CAPITAL MANAGEMENT
13. MANAGEMENT OF INVENTORY
14. MANAGEMENT OF RECEIVABLES AND PAYABLES
15. MANAGEMENT OF CASH
16. ISLAMIC FINANCE

HOW TO USE THESE NOTES

These notes should be used together with the latest revision kit.

Rework all questions done with me on your own. The key to passing this paper is **practicing exam standard questions under time**. Always time yourself whenever you practice a question. Remember all you need to do is gain enough marks to 50%, get the basics right, if you get stuck on particular part of a question leave it and earn marks elsewhere. Practice! Practice! Practice! The more you do this the **easier** the questions become, and the challenging bits become straightforward.

You can **use your text book for reference only**.

EXAM STRUCTURE

Time: 3 hours

Section A: 15 MCQs each 2 marks	30 marks
Section B: 3 scenarios consisting of 15 MCQs 2 marks each	30 marks
Section C: Two 20mark structured response questions	40 marks
	Total 100 marks

Section A and B questions can cover any area of the syllabus. The two 20mark questions in Section C will mainly come from working capital management, investment appraisal and business finance areas of the syllabus.

Formulae Sheet

Economic order quantity

$$= \sqrt{\frac{2C_oD}{C_H}}$$

Miller – Orr Model

$$\text{Return point} = \text{Lower limit} + \left(\frac{1}{3} \times \text{spread}\right)$$

$$\text{Spread} = 3\left[\frac{\frac{3}{4} \times \text{transaction cost} \times \text{variance of cash flows}}{\text{interest rate}}\right]^{\frac{1}{3}}$$

The Capital Asset Pricing Model

$$E(r_i) = R_f + \beta_i\left(E(r_m) - R_f\right)$$

The asset beta formula

$$\beta_a = \left[\frac{V_e}{\left(V_e + V_d(1-T)\right)}\beta_e\right] + \left[\frac{V_d(1-T)}{\left(V_e + V_d(1-T)\right)}\beta_d\right]$$

The Growth Model

$$P_o = \frac{D_0(1+g)}{(r_e - g)}$$

Gordon's growth approximation

$$g = br_e$$

The weighted average cost of capital

$$WACC = \left[\frac{V_e}{V_e + V_d}\right]k_e + \left[\frac{V_d}{V_e + V_d}\right]k_d(1-T)$$

The Fisher formula

$$(1+i) = (1+r)(1+h)$$

Purchasing power parity and interest rate parity

$$S_1 = S_0 \times \frac{(1+h_c)}{(1+h_b)} \qquad F_0 = S_0 \times \frac{(1+i_c)}{(1+i_b)}$$

Present Value Table

Present value of 1 i.e. $(1 + r)^{-n}$

Where r = discount rate
n = number of periods until payment

Discount rate (r)

Periods (n)	1%	2%	3%	4%	5%	6%	7%	8%	9%	10%
